

**BI  
DIGI  
TAL**

# L'intelligenza Artificiale nel Day-by-Day

Automatizzare le Attività Quotidiane per Migliorare l'Efficienza Funzionale

# KI REPLY

INNOVATE DON'T IMITATE

“

The mission of **KI** is to support clients, both methodologically and technically, in the adoption of **low-code no-code** platforms and the introduction of **AI** in the **software development cycle**.

## EXPERT

We are a **boutique** of graduates in technical computer science disciplines really close to technology

## LOCAL

All our **talents** are in **Italy**, between Bologna, Milan, and Turin. Close to customers

## INNOVATIVE

We create **digitalization strategies** using new approaches based on **LCNC** powered by **AI**

# BUSINESS CHALLENGE: APPS OUTPACING DEVELOPERS

# EVOLUTION OF LINES OF CODE

# IMPACT OF GENERATIVE AI IN SDLC

## Testing

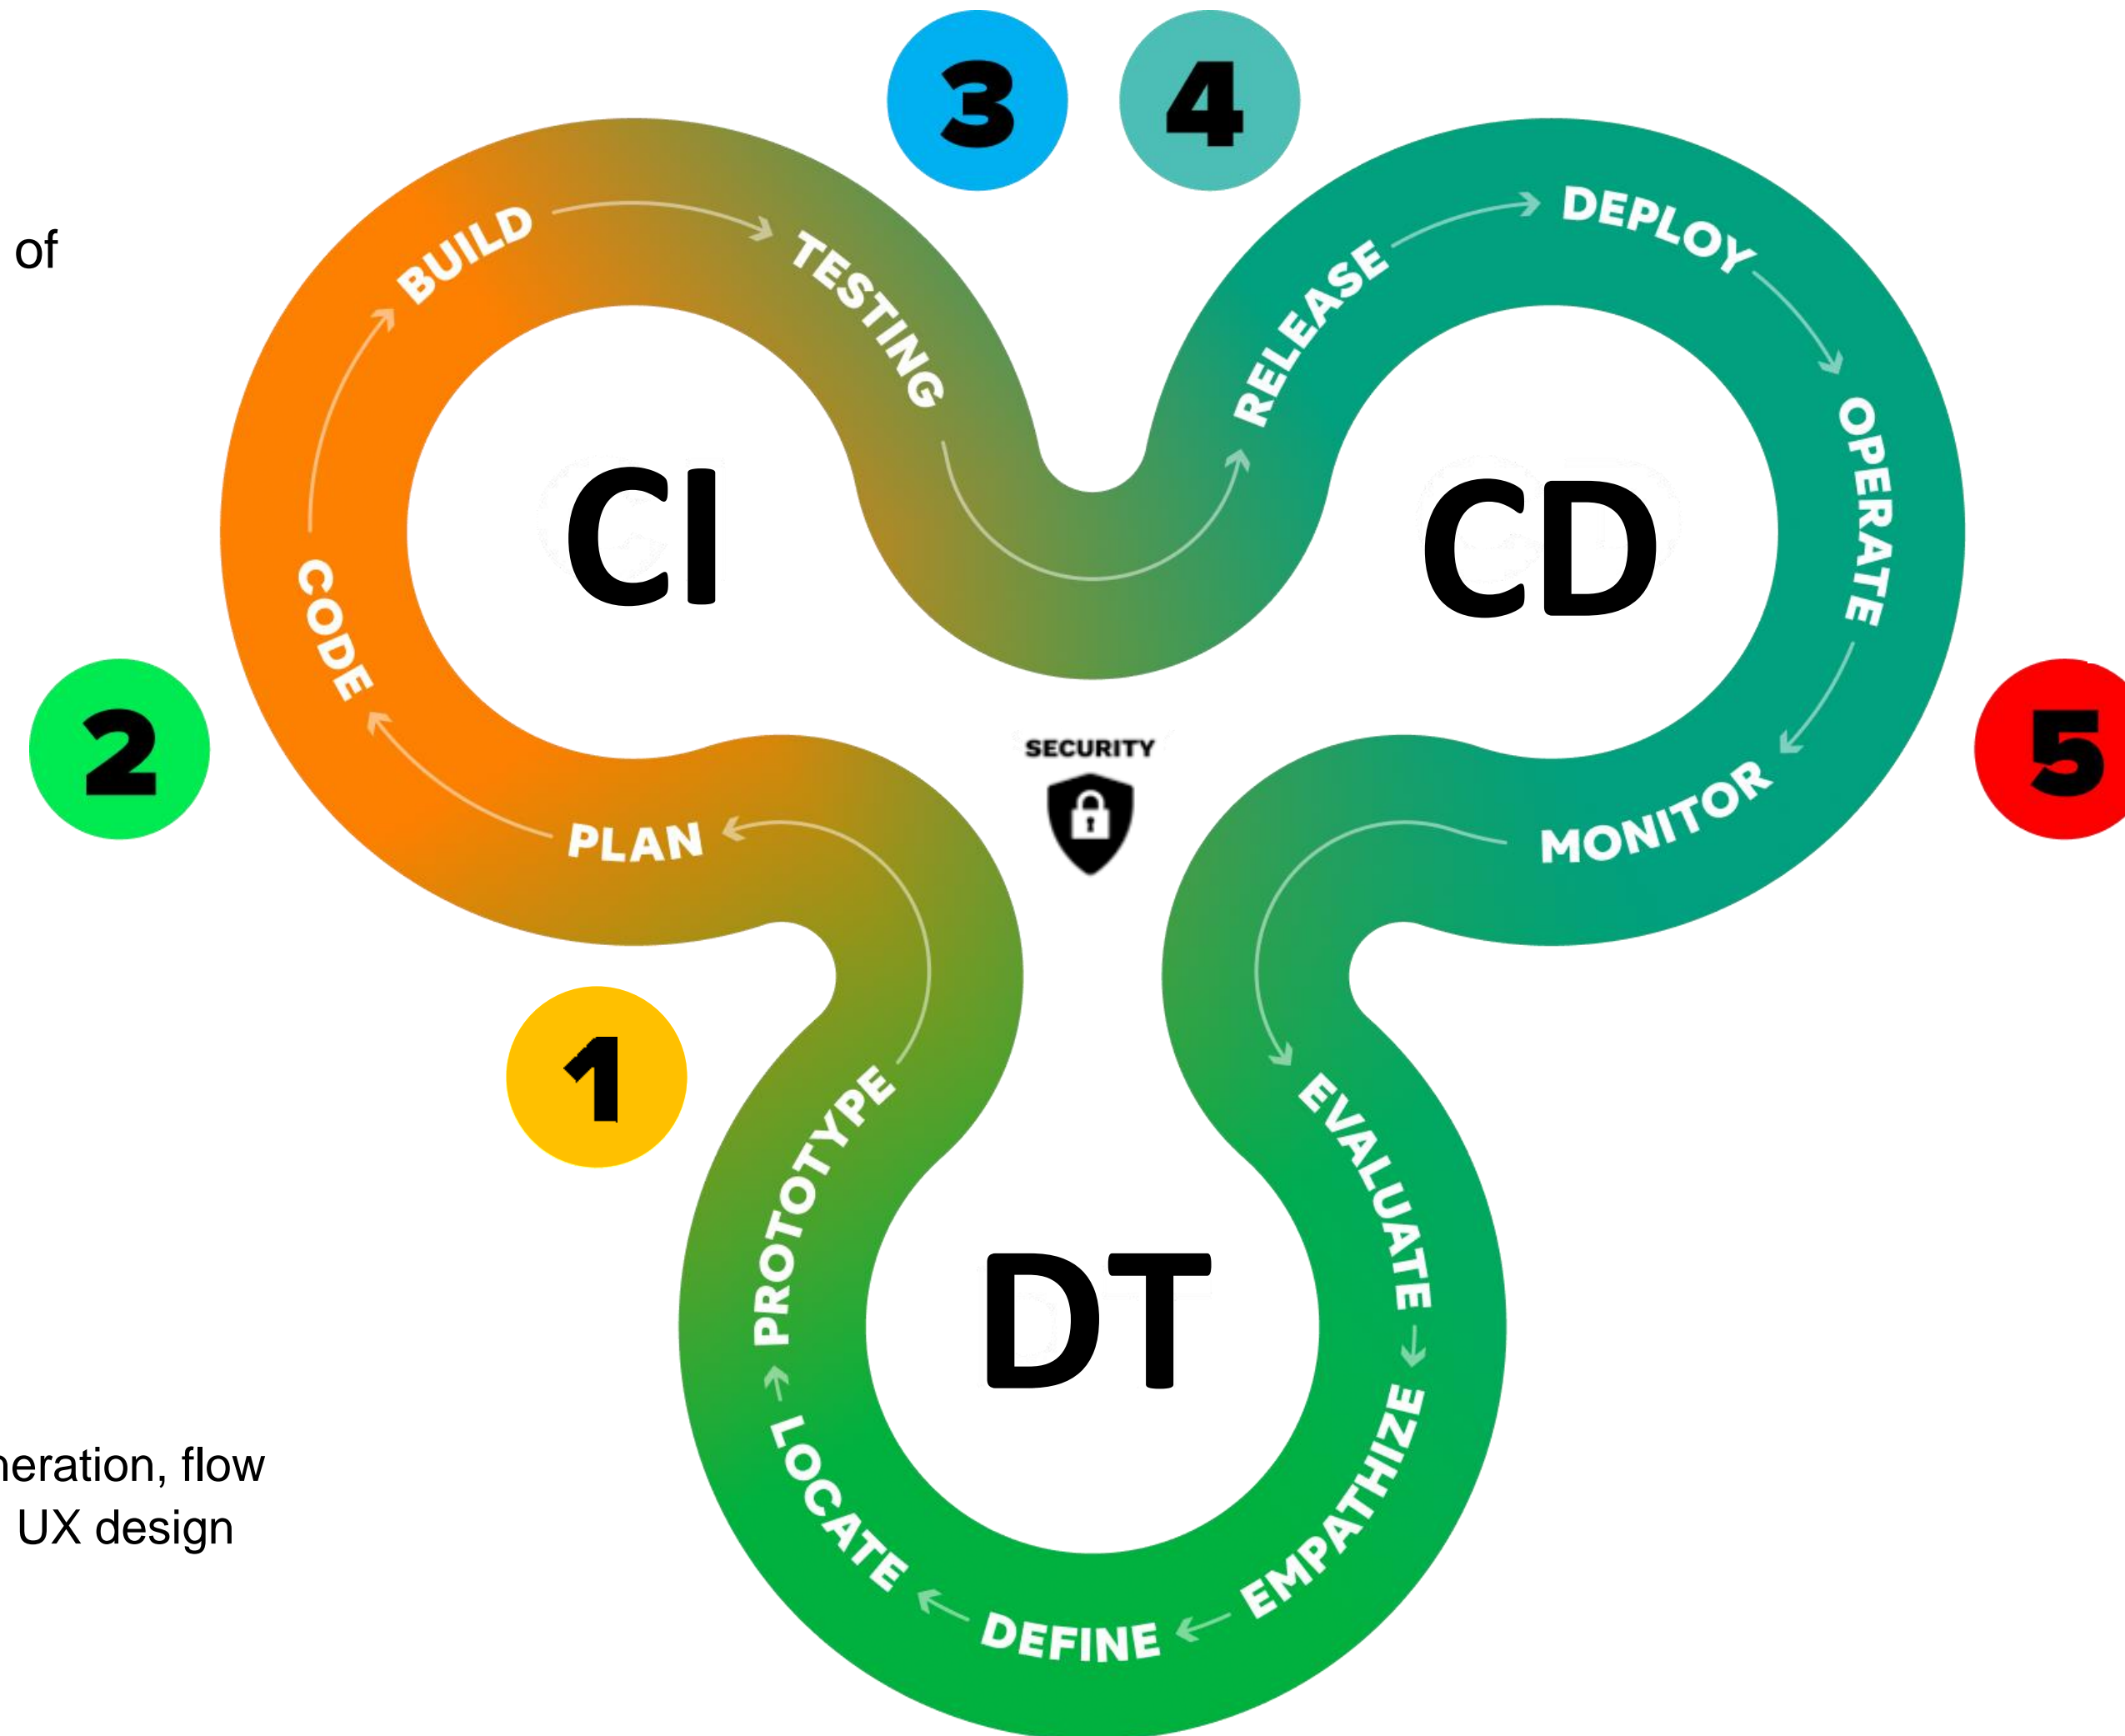

Writing, generation and execution of test cases; Creation of data sets

## Coding

Generation of new code, Refactoring (improving consistency, robustness), Translation, Documentation (explanation, comments)

## Analysis & Design

Requirements analysis, user story generation, flow chart generation, data model creation, UX design assistant, etc...

## Release & Deployment

CI/CD pipeline generation, script automation assistant

## Operate & Monitoring

Performance monitoring and quality control, automatic routing tickets and search for solution models

# MAKING SOFTWARE WITH AI

REPLY'S 3 LEVEL FRAMEWORK

## LEVEL 1

Existing Copilots are incorporated in the development process

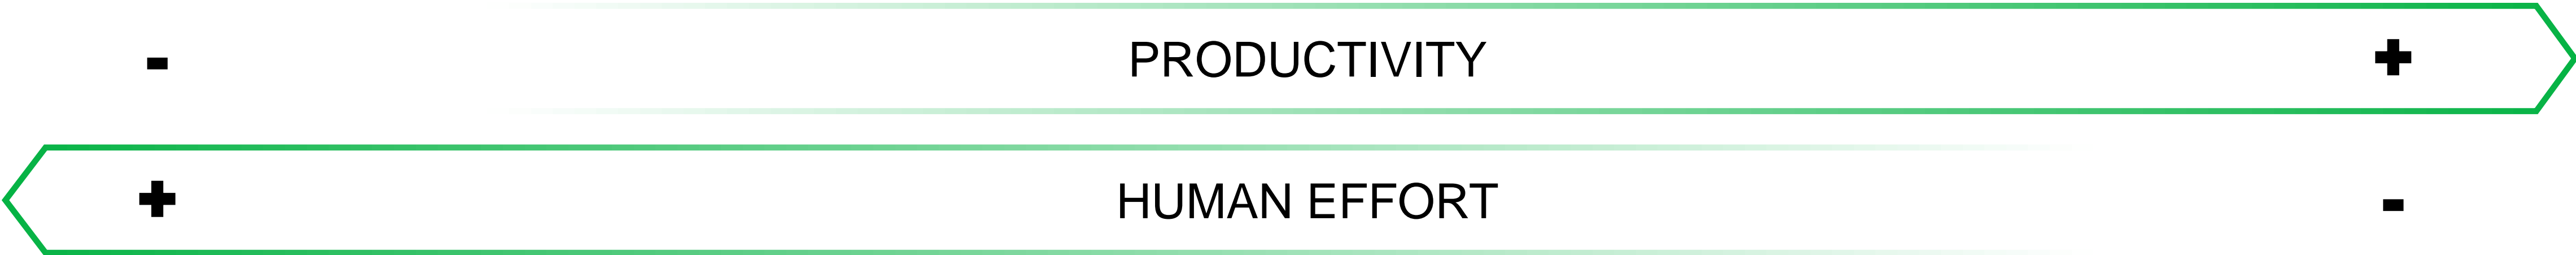

## LEVEL 2

Humans are accompanying by agents as “Peer”

## LEVEL 3

Autonomous agents with human supervision

# REPLY LEVEL 2 AGENTS CATALOG, JUNE 2024

Analysis & Design	Coding Green Field	Coding Replatforming	Testing	Release & Deployment	Operate & Monitoring
<b>AgileBuddy</b> Enhanced efficiency in creating consistent, detailed, contextually coherent user stories.	<b>Archie</b> AI assisted coding framework for FSI + <b>Gensight</b> HD3 ticket troubleshooting	<b>Reverse Engineering Buddy</b> Automatically generates technical documentation from legacy code for modernization project	<b>Testbook</b> Starting from the requirements, create a full test design defining positive, negative and corner use cases	<b>Pipeline Generator</b> CI/CD pipeline generation and maintenance	<b>WarRoom Assistant</b> Real-time data, insights, crisis decision support
<b>Analyst Buddy</b> Enhanced efficiency and accuracy in generating comprehensive functional documents.	<b>MosAlc</b> Front-End coding assistant	<b>MAGIA</b> ESB artifacts translator, capable of creating Apache Camel projects starting from SAG or IBM integration flows code	<b>Gherkin Files &amp; Code Scripting</b> Starting from a test book, implement a test automation suite as assisted coding as well as BDD paradigm	<b>IDIA</b> A GenAI solution aimed at accelerating the resolution of CI/CD pipeline errors	<b>Smart Enhancer</b> Optimizes code performance using infrastructure and observability insights
<b>ArchiMage</b> Takes care of keeping up to date the project KB and making it accessible to the team through a natural lang interface	<b>Code Buddy</b> AI assistant simplifying knowledge sharing and onboarding by generating code and documentation contextualized on specific project	<b>Rosettz</b> Gen AI DataStage migration translator. Tool that leverages GenAI to convert formulas from a programming language to another.	<b>Self-Healing</b> Adjustment of test automation scripts for maintenance purpose due to project changes	<b>ChainDef</b> Determine the appropriate installation sequence in order to avoid potential integration problems	<b>Gensight</b> HD3 management agent who analyzes and suggest incident resolution
<b>Agile Buddy estimator and team selector</b> Enhanced project estimation and team selection for optimal efficiency	<b>DevGenOps</b> A centralized approach to enhance code quality and robustness	<b>VB-AI Magician</b> Reverse engineers VBA scripts to generate comprehensive functional documentation.	<b>Application Explorer</b> Navigate and define a map as nodes of the entire application with included elements and related links	<b>GenReINote</b> Generate release notes from changes in User Stories and CodeBases	<b>Cassiopea</b> Provides clustering and E2E events management in production (and non-production) environments

Security agents for each phase of the SDLC

# Case Study

How to use the approach

# BUSINESS ANALYST

Works with stakeholders to define project requirements through **meetings**

Create Functional **Documentation**

# BUSINESS ANALYST

- Business analysts spend **a lot of time** attending informational meetings to gain **insight** into the project they are working on
- The **resources** to be invested to allow the business analyst go beyond his figure as developers, seniors and project managers are needed
- After the meetings, additional time is needed to write **the summary** of the meeting to persist the information discussed

# BUSINESS ANALYST

Another of the business analyst's time-consuming tasks is that of **writing documents**.

The main problems in this regard can be summarized in:

- **Lack of information**: The analyst must ask for additional information from the project members
- **Template**: The analyst must follow a template for writing documents
- **Evolution**: The analyst must update and adapt documents in line with the project's evolution

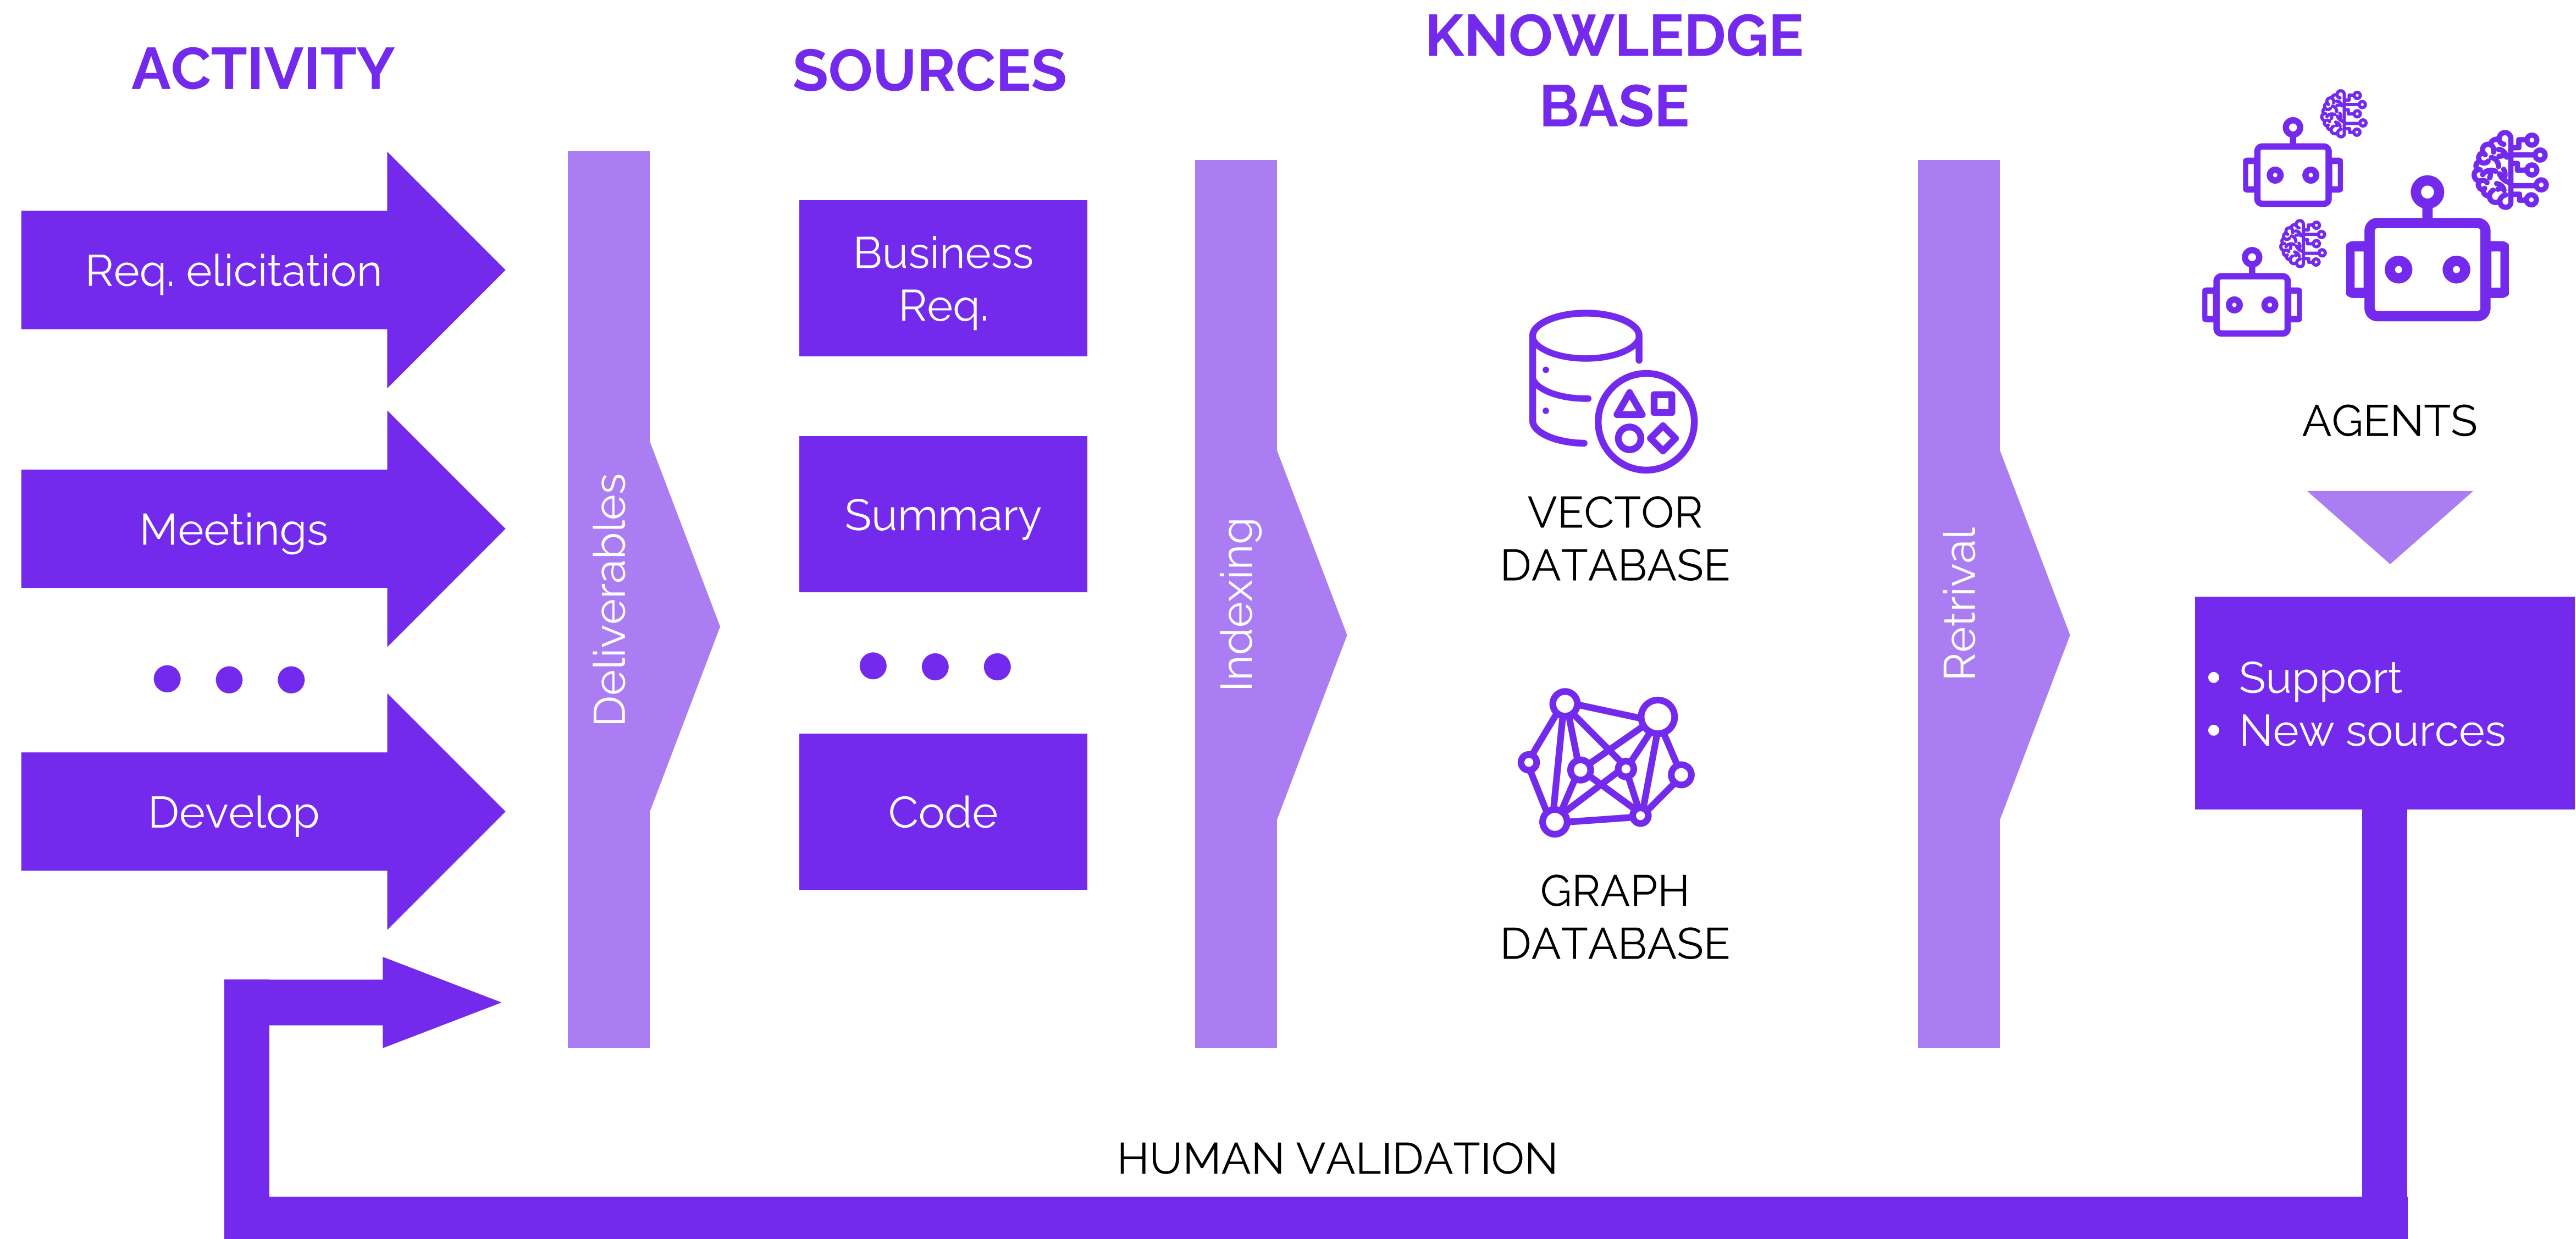

**HOW CAN WE DO IT BETTER**

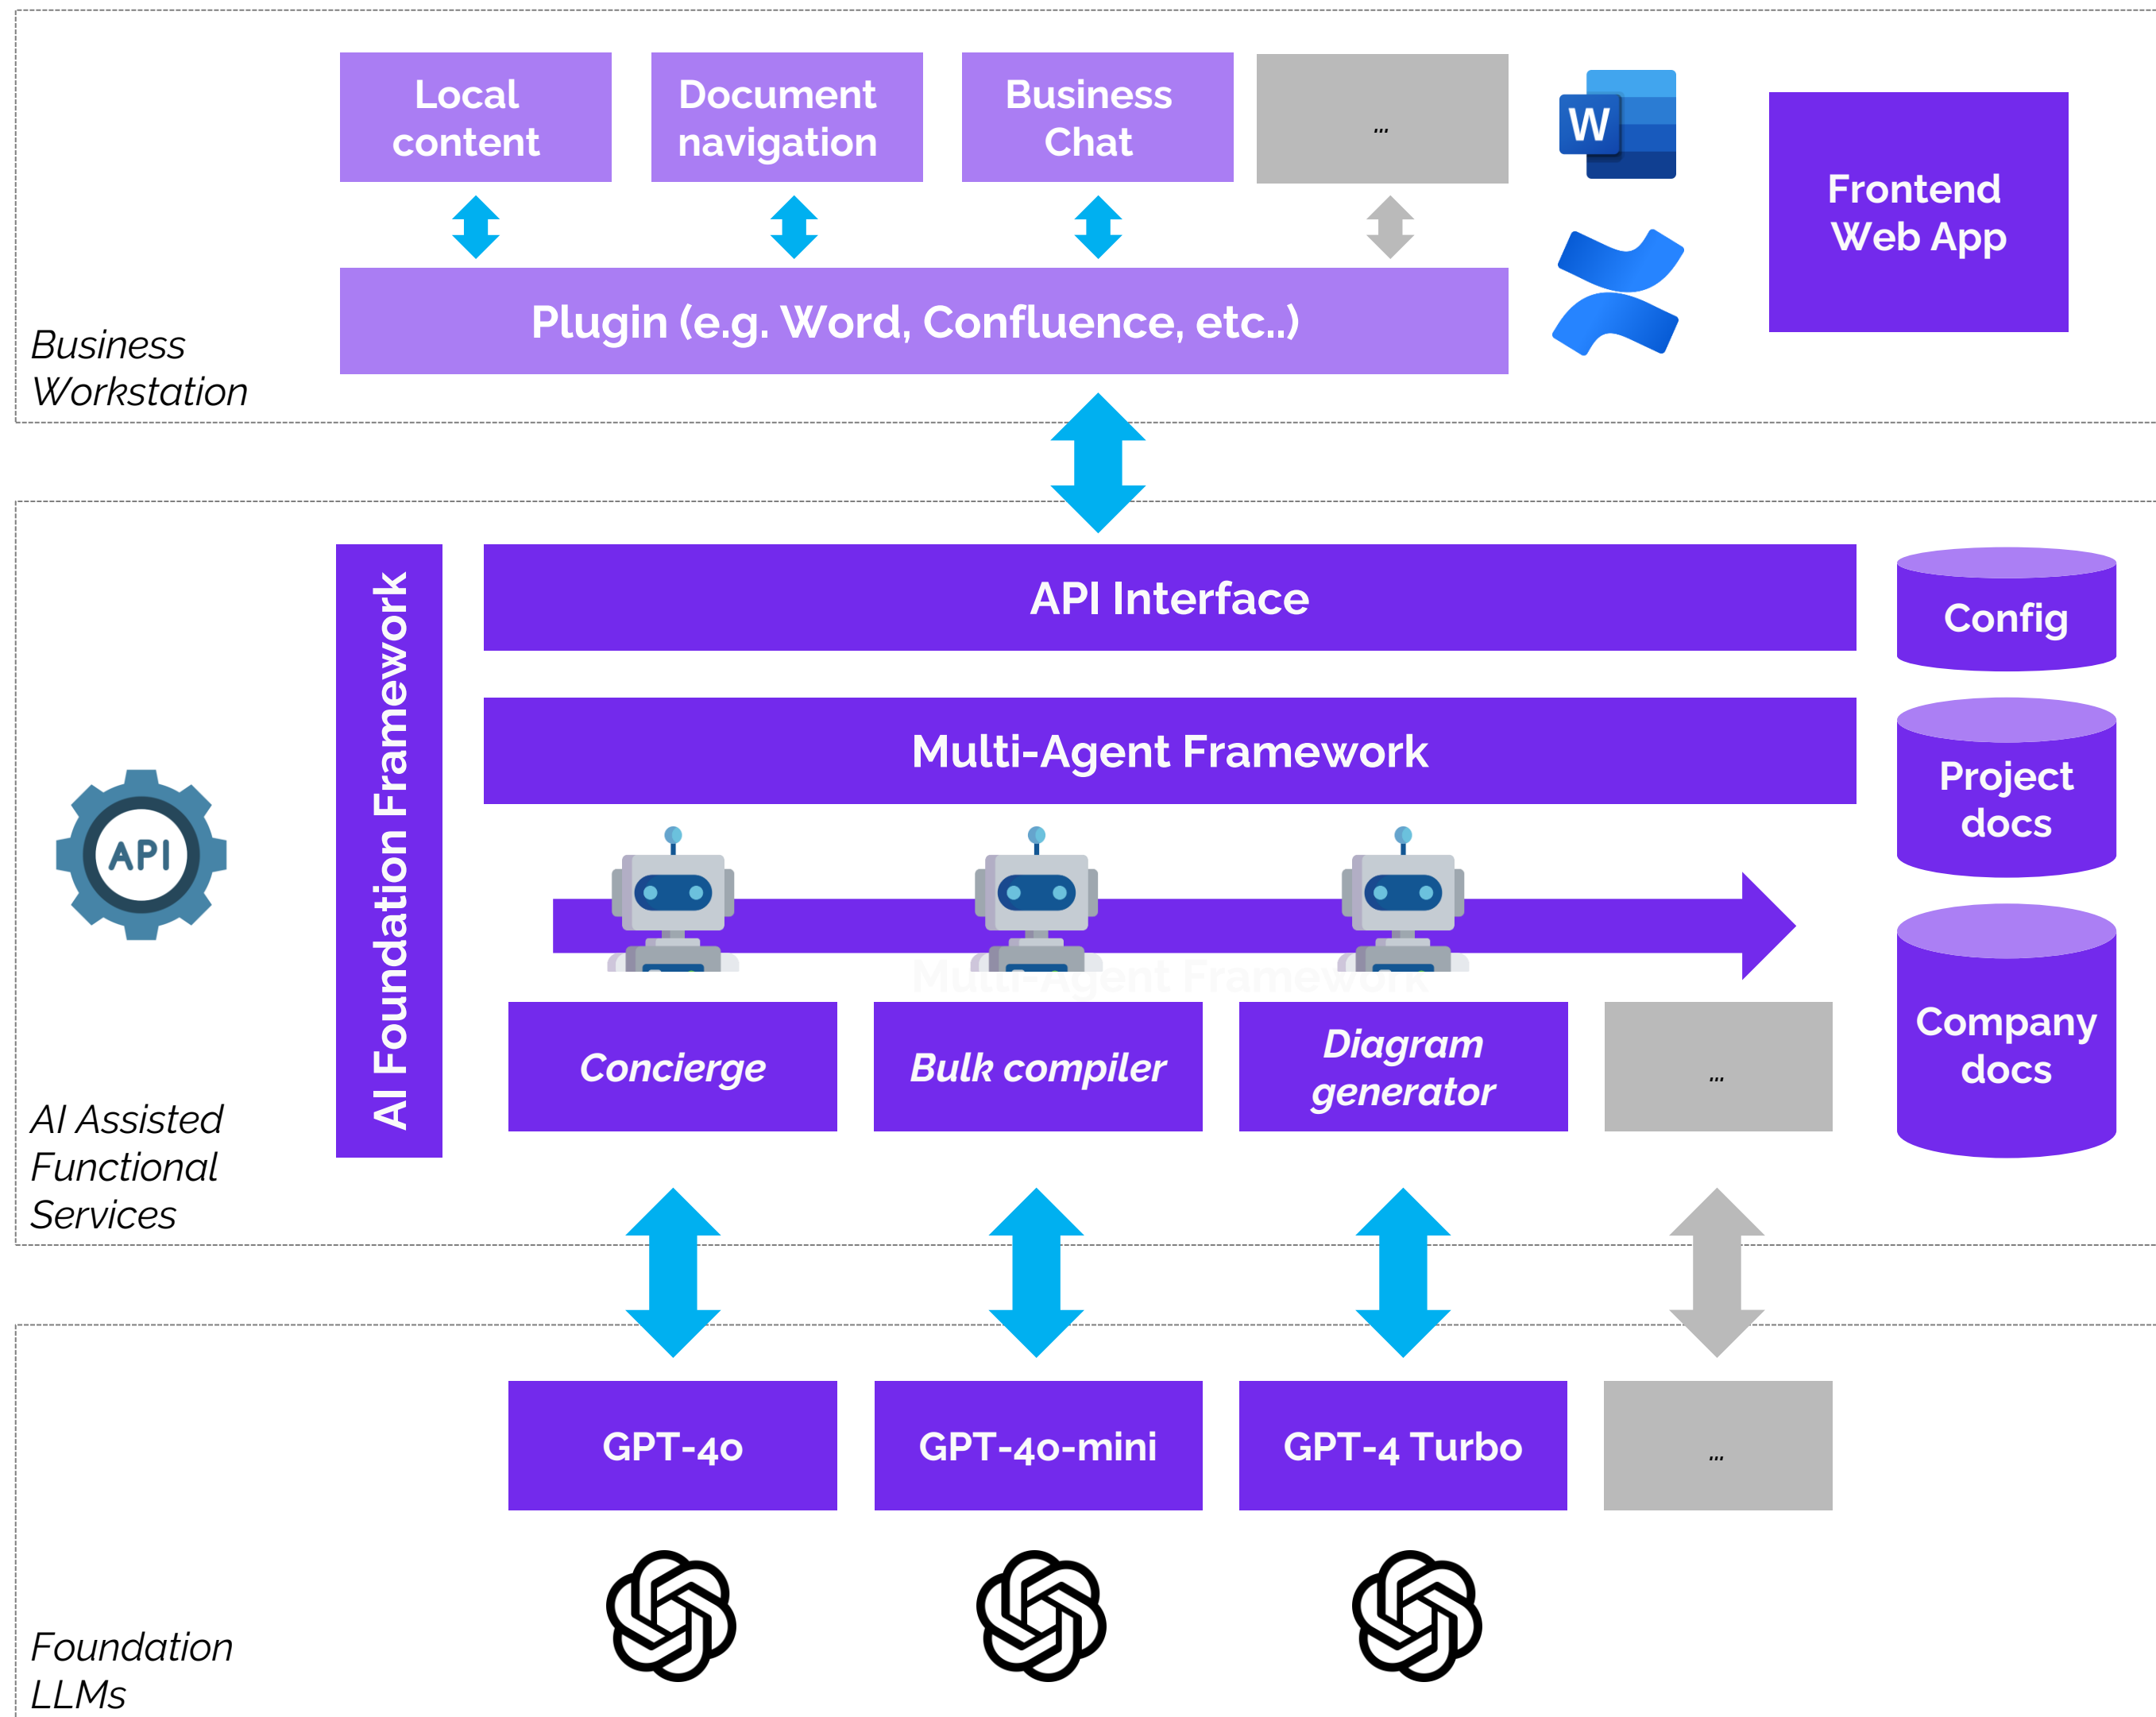

# END-TO-END PROJECT KNOWLEDGE

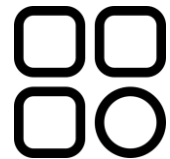

# HIGH LEVEL ARCHITECTURE

## MAIN CAPABILITIES

 **Interfaccia Conversazionale:** chat via web o integrata dentro Word che permette di interagire con l'assistente in linguaggio naturale

 **Contestualizzazione:** l'integrazione con la knowledge-base di ambito permette forte contestualizzazione tecnologica e funzionale

 **Ecosistema Plug & Play:** ecosistema flessibile che permette l'integrazione di agenti «personalizzati» per esigenze specifiche

## AI TOOLS & TECHNIQUES

- Fine tuning
- RAG
- Multi Agent
- Functions
- GPT-4 API

**WHAT'S NEXT**

# NEXT CHALLENGES

## COMPLETENESS

- **Increased** likelihood of **errors**: Incomplete information leads to a higher probability of incorrect responses.
- **Risk of fabrication**: Partial data may cause the system to generate completely fabricated answers.

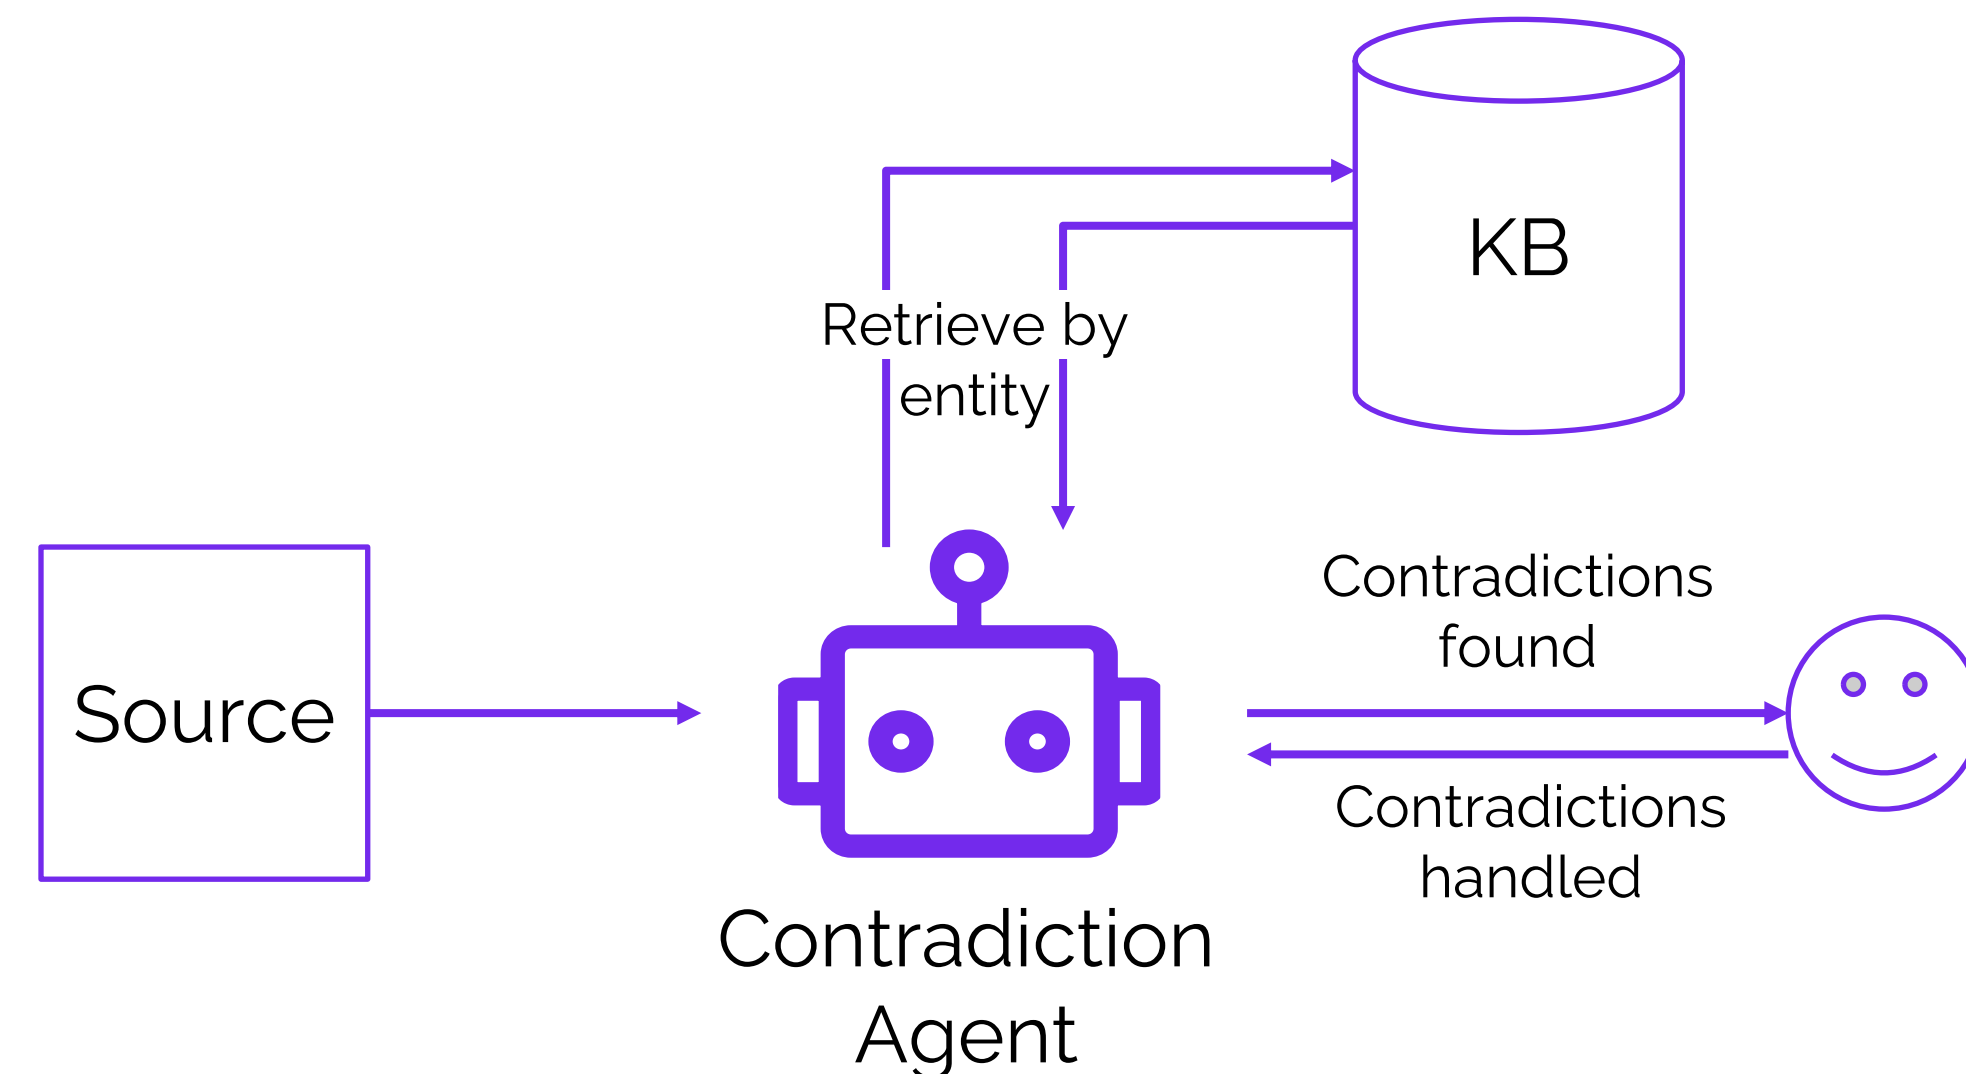

# NEXT CHALLENGES

COMPLETENESS

CONTRADICTION

- **Inconsistent** input increase system complexity, making it harder to archive reliable outputs
- Contradictory data can lead to **error propagation throughput** the system, compounding low accuracy

# CONTRADICTION AGENT

Nuova user story: come utente, voglio poter **confermare un ordine senza avere la possibilità di rivedere tutti gli articoli** aggiunti, in modo da accelerare il processo di acquisto.

## Philosophical Contradiction

Contradictory text:

Logisphere, sito web per gestione del magazzino e degli ordini. **Intuitivo e facile da usare, anche per chi non è pratico.** Design pulito e moderno, colori chiari e rilassanti, come il blu e il grigio. Grandi pulsanti e testi leggibili per facilitare la navigazione. Dashboard...

Analysis:

L'analisi dei due testi mostra una contraddizione. Nel primo testo si descrive Logisphere come un sito web intuitivo e facile da usare, con design pulito e moderno. Tuttavia, nel secondo testo si esprime un **desiderio che va contro l'intuitività e facilità d'uso** descritte negli attuali requisiti: la possibilità di confermare un ordine senza rivedere tutti gli articoli aggiunti. **Questa nuova funzionalità potrebbe causare errori e frustrazione per gli utenti, contraddicendo così la caratteristica di essere facile da usare.**

## Logical Contradiction

Contradictory text:

... devo poter cercare e selezionare gli articoli dal magazzino, filtrandoli per il nome o il codice dell' articolo, ecc. Una volta trovato l'articolo, lo seleziono e inserisco la quantità desiderata. **Prima di confermare l'ordine, voglio avere la possibilità di rivedere tutti gli articoli** aggiunti, con le relative quantità e prezzi. Devo poter modificare la quantità o ...

Analysis:

Il primo testo specifica che prima di confermare l'ordine, l'utente vorrebbe avere la possibilità di rivedere tutti gli articoli aggiunti, con relative quantità e prezzi. Il secondo testo, invece, afferma che dovrebbe essere possibile confermare un ordine senza rivedere tutti gli articoli aggiunti. **Queste affermazioni sono direttamente contraddittorie perché una implica la revisione degli articoli prima della conferma, mentre l'altra esclude questa possibilità.**

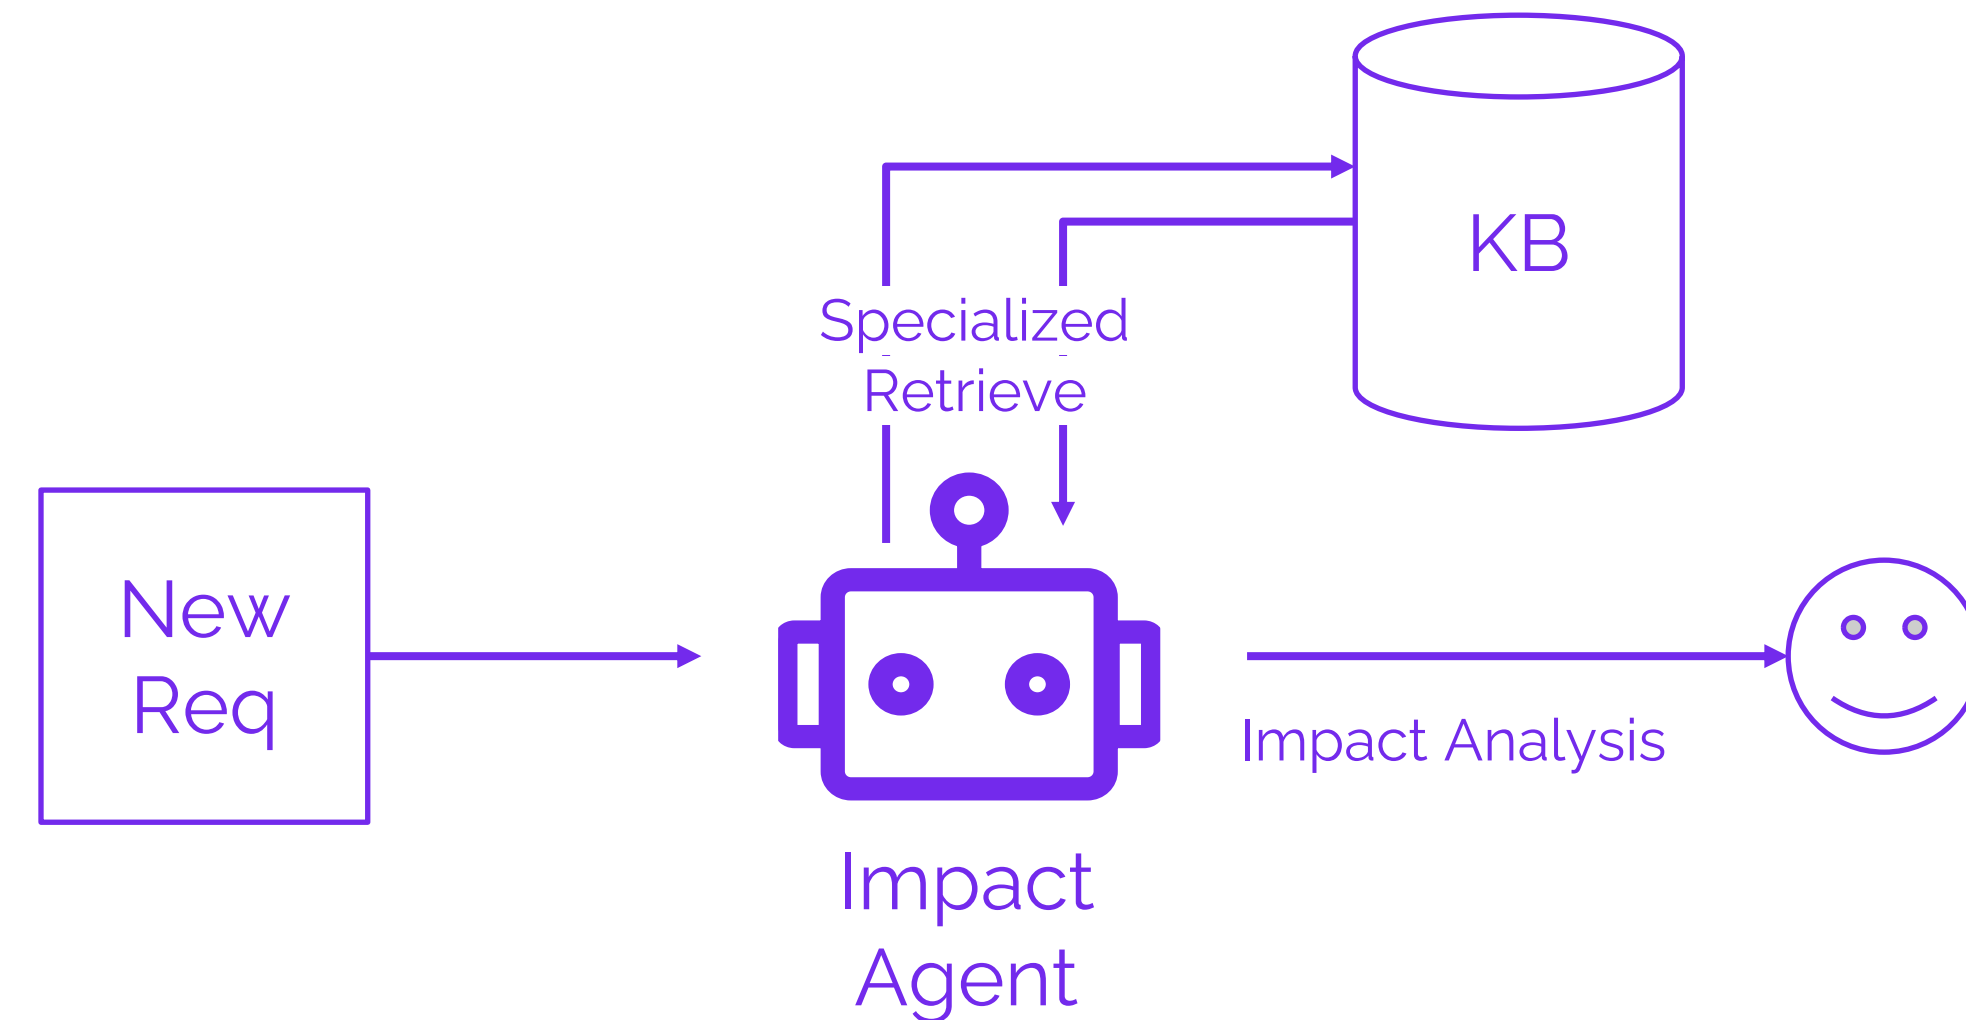

# NEXT CHALLENGES

COMPLETENESS

CONTRADICTION

IMPACT ANALYSIS

- **Critical in evolving processes:** Impact analysis is essential due to the continuous evolution of processes.
- **Supports informed decisions:** Anticipating impacts allows for more informed decision making.
- **Prevents project disruptions:** If a change request alters core project decisions, it can be excluded early on.

**Thank  
you**

**Sellalab**
